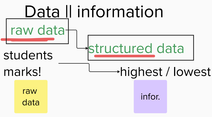
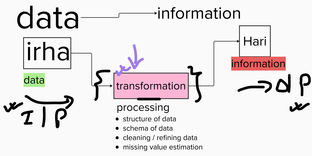
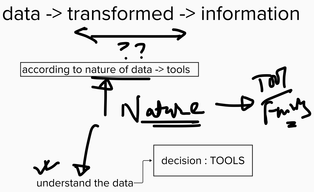
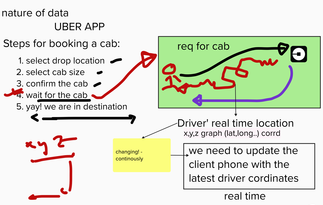
Agenda

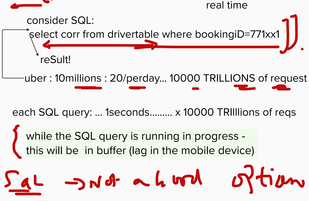
- Data || information
- Data transformation
- Data flow : architecture diagram
- problemStatement:
  - Why Kafka
- Understand ETL / ELT
- streaming useCases
- Kafka - integration
- Demo: Kafka
- QnA
- Share the resources!







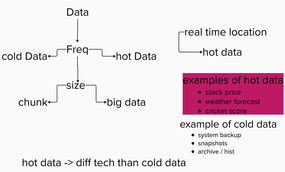




each SQL query: ... 1seconds..... x 10000 TRIlllions of reqs

{ while the SQL query is running in progress -
this will be in buffer (lag in the mobile device)

based on the nature of data
- select the - technical stack

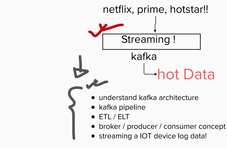


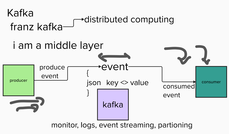
hot data -> diff tech than cold data

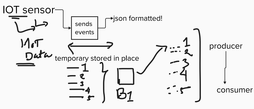
hot data -> streaming data (flow continously)

cold data -> batch/slot data (batches ...)

Streaming phase!





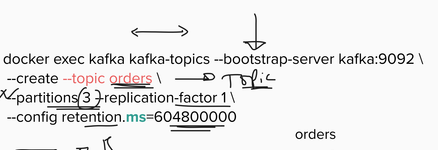


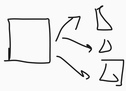
steps for lab:

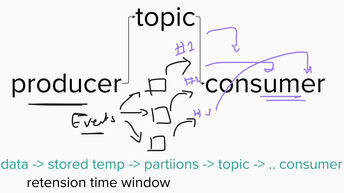
1. run kafka with docker
2. sample data (event)
3. run the kafka
   a. window1 : admin kafka
   b. window2: producer
      i. sample data (json)
      ii. sent!
   c. window3: consumer
      i. received to consumer
      ii. received!

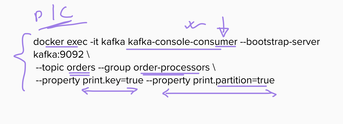
demo -> mE!

guide demo







hot data -> stored temp -> partiions -> topic -> .. consumer


retension time window
